Exploración del conjunto de datos que tenemos de la zona norte de pepsi.

Makefile: pandoc -s -V geometry:margin=0.7in -V lang=spanish 1_exploratorio.md -o Exploratorio.pdf

Sólo vamos a utilizar los datos de SalesDataYYYYXXX.txt porque vamos a intentar aproximar inventarios. Antes de hacer modelos para ver wtf, hay que ver si hay sobre o subdistribución. Pero antes, exploración de datos. David hizo una selección de tres productos: churrumais, fritos y papas normales.

Ventas negativas!?!? Tbn devoluciones negativas!!!

Para esto quizá tampoco necesitemos las rutas; en bash podríamos tbn quitar esa columna Plots:

```
par(mfrow = c(2, 2))
plot(table(datos$vta din), main = "Ventas en dinero")
```

```
plot(table(datos$vta_uni), main = "Ventas en unidades")
plot(table(datos$dev_din), main = "Devoluciones dinero")
plot(table(datos$dev_uni), main = "Devoluciones unidades")
par(mfrow = c(1, 1))
```

Figura 7: Ventas y devoluciones Sabritas normales

Plots de las ventas y devoluciones versus las otras cosas

```
par(mfrow = c(4, 7))
myfunction <- function(x) {
    plot(x$vta_din, ylim = c(min(datos$vta_din), max(datos$vta_din)), main = x$id_prod[1])
}
by(datos, datos$id_prod, myfunction)
par(mfrow = c(1, 1))

par(mfrow = c(4, 7))
myfunction <- function(x) {
    plot(x$dev_uni, ylim = c(min(datos$dev_uni), max(datos$dev_uni)), main = x$id_prod[1])
}
by(datos, datos$id_prod, myfunction)
par(mfrow = c(1, 1))</pre>
